UPDATE THE VEHICLE DATABASE

Adds new vehicles from BreakerPro to the Parts Logger. Takes about 2 minutes. Do this **every time new vehicles are booked in**.

WHERE

`Desktop \ Pulled Apart Ltd \ parts-logger-backend \ vehicle-imports`

STEPS

1. **Export from BreakerPro**
   Export the **Stock Reference** report as a CSV. Always export the full list; it's safe to include vehicles already logged.

2. **Drop the CSV into `inbox`**
   Save or move the CSV into the `inbox` folder. Don't open it in Excel first.

3. **Double-click `Update Vehicles.bat`**
   A black window opens and checks every vehicle. Wait until it says **Press any key to continue**.
   Shortcut: you can drag the CSV straight onto `Update Vehicles.bat` instead of steps 2–3.

4. **Check the result**
   Read the **New vehicles added** list and make sure it matches the cars you just booked in. Then press any key to close.

WHAT YOU'LL SEE

MESSAGE	MEANING / WHAT TO DO
All done CSV moved to `done`	Worked. Nothing else to do.
**** PROBLEM** CSV left in `inbox`	Some rows failed or there was no internet. Check the connection and run `Update Vehicles.bat` again. If it fails twice, send the latest file from `logs` to Naveed.
Nothing to import	The `inbox` is empty. Put the CSV in `inbox` first.
New vehicles added: none	All vehicles were already in the database. Fine if nothing new was booked in.

RULES

- **Never** put files in `done` or delete anything from it. The script manages it.
- Running it twice or re-importing old vehicles **won't create duplicates**. It matches on the stock ref (VEH number).
- It never overwrites existing details. It only fills in blanks.
- **One car = one stock ref.** If a car gets booked into BreakerPro twice under two refs, it will appear twice. Fix duplicates in BreakerPro, not here.
- Wrong reg, VIN or paint code? Fix it in BreakerPro at booking-in. The script copies what's there.
